

Measurement Lab 1

The scientist takes a tape measure, and finds 3 family members or friends. He measures the first person in centimeters and adds this person's height to a table. Then the scientist measures the other 2 people in the same exact way.

Measurement Lab 2

The scientist gently dips the thermometer in the boiling water. Then he writes the result in a table. After 2 minutes pass he tries again gently putting the thermometer in the steamy water. Then the scientist does this again 6 times.
